

The level of automation applied to this new WordPress Blog Creator Software is to the moon! Pete automated the entire process, creating new email addresses used to create the new WordPress blogs on WordPress.com

[Never need to buy/create email address's again]

You supply:

- The List of Keywords you'd like to rank for.
- An article related to your product or service
- Address of the business you are promoting, or location where you'd like to get ranked.
- One or MORE YouTube Video URL's. The software embeds your video in the blog, with your article content wrapped around it. Really highlighting the product or service you are promoting.
- Image content. Select a folder with one or more images in it. If more than one, the software will randomly choose one of the images in this folder so you can create unlimited "Unique" Blogs from one original project.
- Links to sites you want/need more social signals from.

The software does everything, including getting your content to **rank in Google**

A New Customer posted a Testimonial "15" minutes after ordering the software. With results "Already" Ranking P1 Google.
